Hole pattern for mounting

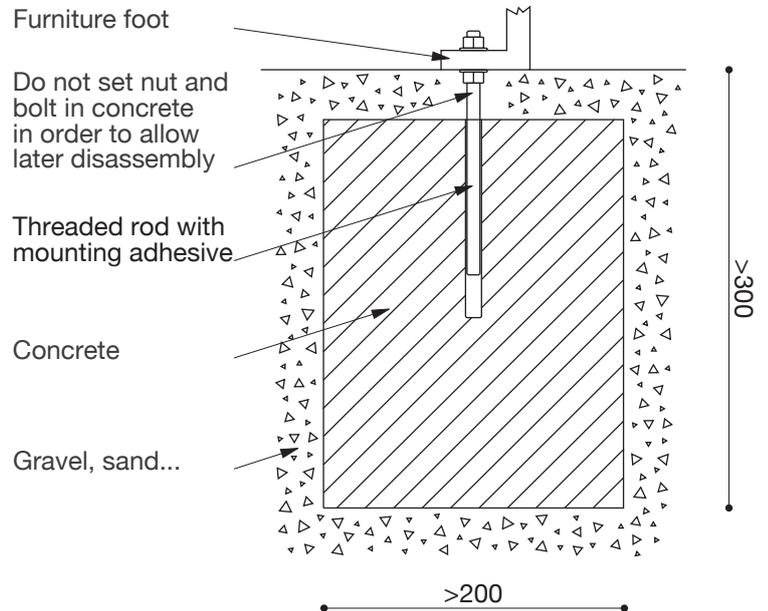

Mounting

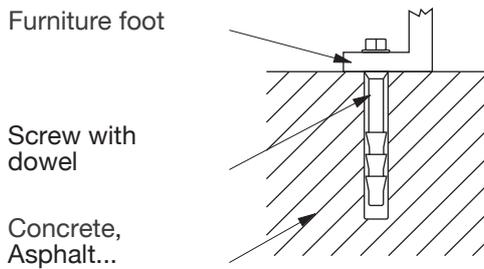

Without foundation
with threaded rod

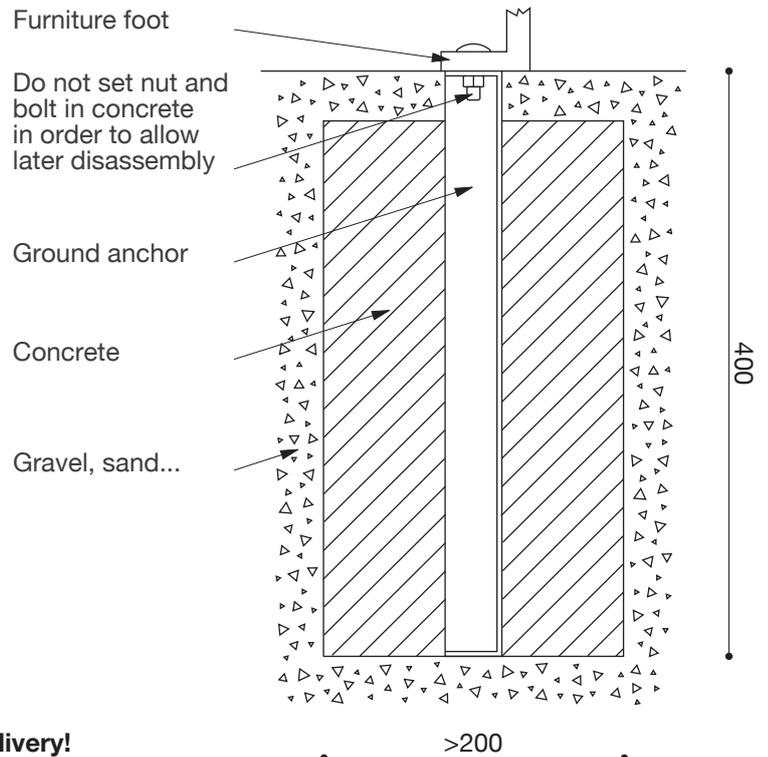

With foundation
with threaded rod

Without foundation
with screw and dowel

With foundation
with ground anchor

The fasteners are not included in the scope of delivery!

Mounting

City Lounge consists of a hot-dip galvanised angle steel frame and a body of polyethylene, which is filled with polyurethane foam. The angle steel frame is bolted to the ground. Then the body is set onto the frame and fixed with four counter-sunk screws. The fasteners for ground bolting are not included in the scope of delivery, they must be selected according to the subsurface in question.

Assembly of a combination of several elements:

1. Position the individual elements according to the desired configuration
2. Mark the position of the angle steel frame on the ground
3. Loosen the counter-sunk screws and remove the polypropylene body from the angle frame
4. Mount the angle steel frame on the ground. The fasteners are not included in the scope of delivery. They must be selected according to the desired strength of the connection and the qualities of the subsurface
5. Insert the polypropylene body into the angle steel frame and fasten it with the counter-sunk screws.
